1. Solve x^2 - 25 = 0.

Response: x = 5

Synthetic teacher mark: 1/2
Correct answer: x = 5 or x = -5
Feedback: Only the positive root is written.

2. Solve (x - 5)(x + 6) = 0.

Response: x = 5

Synthetic teacher mark: 1/2
Correct answer: x = 5 or x = -6
Feedback: The second factor's root is missing.

3. Expand (x + 5)(x - 1).

Response: x^2 + 6x - 5

Synthetic teacher mark: 1/2
Correct answer: x^2 + 4x - 5
Feedback: The written middle coefficient is incorrect.

SYNTHETIC - assistant draft labels; maintainer review required

4. Find the vertex of y = (x - 5)^2 + 6.

Response: (5, 0)

Synthetic teacher mark: 1/2
Correct answer: (5, 6)
Feedback: The vertex's vertical coordinate is incorrect.

SYNTHETIC - assistant draft labels; maintainer review required

5. Find the axis of symmetry of y = (x + 5)^2 - 1.

Response: x = 5

Synthetic teacher mark: 1/2
Correct answer: x = -5
Feedback: The written axis has the wrong sign.

6. Find the discriminant of x^2 + 7x + 5 = 0.

Response: D = (7)^2 + 4(5) = 69

Synthetic teacher mark: 1/2
Correct answer: D = 29
Feedback: The response adds 4ac instead of subtracting it.

SYNTHETIC - assistant draft labels; maintainer review required

7. Find the y-intercept of y = x^2 - 6x + 5.

Response: (5, 0)

Synthetic teacher mark: 1/2
Correct answer: (0, 5)
Feedback: The coordinates written for the y-intercept are reversed.

8. Factor 5x^2 - 25x completely.

Response: 5x(x + 5)

Synthetic teacher mark: 1/2
Correct answer: 5x(x - 5)
Feedback: The second term inside the factor has the wrong sign.

9. Classify the turning point of y = -(x - 5)^2 + 25.

Response: Minimum at (5, 25)

Synthetic teacher mark: 1/2
Correct answer: Maximum at (5, 25)
Feedback: The response labels the turning point as a minimum.

10. Complete the square: x^2 + 10x + 28.

Response: (x + 5)^2

Synthetic teacher mark: 1/2
Correct answer: (x + 5)^2 + 3
Feedback: The constant adjustment is missing from the written expression.
